**Stitching**

The first basic difference is in the stitching. The Dukes is hand-stitched with three rows of thread that are more spaced apart, giving it a more prominent seam. The SG, on the other hand, is machine-stitched with two rows of thread that are closer together, making the seam less prominent. The Kookaburra is hand-stitched, with two outer rows that are more spaced apart and the inner rows that are closer together.

**Seam**

All the seams of stitching in the Dukes ball are horizontally placed across the surface of the ball, giving it a more prominent seam. The SG ball has a more vertical seam, making it more difficult for the batsmen to pick up and play. The Kookaburra ball has a seam that is a combination of both, making it the most difficult to play.

**Weather and Pitch Conditions**

Weather conditions and the nature of the pitches play a significant role in the evolution of the cricket ball over the years. The evolution of the ball is more evident in Test cricket and limited-overs cricket. The SG ball is used in Test cricket in India, while the Kookaburra is used in limited-overs cricket. The Dukes ball is used in both Test and limited-overs cricket.

**Player Preferences**

It’s been interesting to note how with more spin and nozzles creating a more prominent seam, the batsmen have started playing with more caution. The SG ball, with its hand-stitched nature, is preferred by the batsmen, while the Kookaburra is preferred by the bowlers. The Dukes ball is a compromise between the two.
